BALTIC SEA FISHING ETHICAL CODE

Respect fish, man and nature.

This ethical code is divided into the statement of the fishing tourism businesses and associated partners within the Baltic Sea Fishing Guide Alliance, and the ethical guidelines for ALL fishing performed under this label.

⋮

STATEMENT OF THE BALTIC SEA FISHING GUIDE ALLIANCE

We give back to Baltic Sea fish populations.
We depend on natural resources; therefore, we give back using earmarked funds derived from fishing tourism to local coastal fish conservation measures - primarily to strengthen seatrout populations.

We act as sportfishing ambassadors.
We make sure to convey knowledge about sustainable sportfishing and positive effects of angling; use specific and modern equipment and methodologies intended for fishing respective target fishes; practice good seamanship; and take pride in knowing the environment and how to protect it.

We provide high quality services.
We make sure to understand the needs and ambitions of our customers and realize them; are aware of example as fishing guides; able to teach and when to guide; are in the forefront of angling skills and know the best local fishing spots. We use free time to find new productive areas, which will develop us as guides and increase our reputation among our customers.

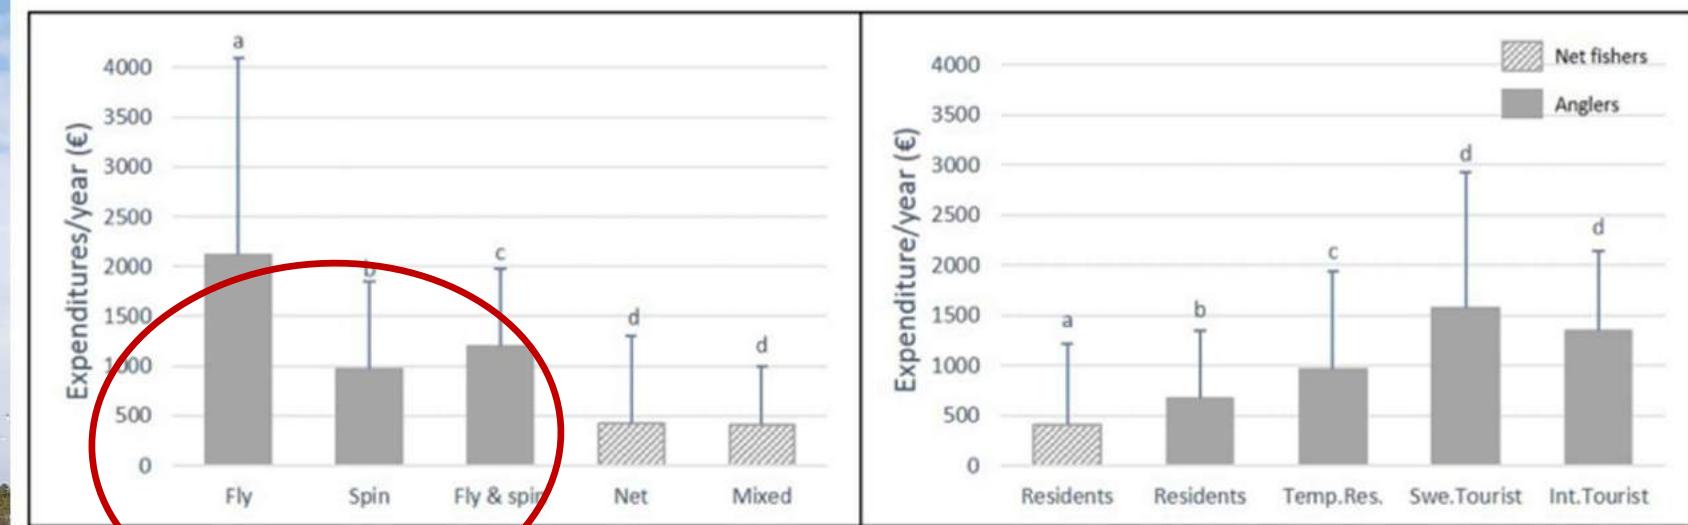

Finally, we ensure that ALL customers fishing under this label are informed of the ethical guidelines.
